

WHAT IS CLAIMED IS:

wherein 60% or more of the total projected area of silver halide grains contained in at least one of the red-, green- and blue-sensitive silver halide emulsion layers is occupied by tabular silver halide grains having an aspect ratio of 8.0 or more, and

wherein the plastic material member is that
produced from a resin to which a substance capable of
20 adsorbing a substance having an adverse effect on a
photographic property has been supplementally added
prior to molding thereof.

2. The lightsensitive material package according to claim 1, wherein the tabular silver halide grains each have 10 or more dislocation lines per grain.

3. The lightsensitive material package according to claim 2, wherein the substance capable of adsorbing

produced from a resin to which a compound represented by the following general formula (TS-I) and/or (TS-II) has been supplementally added prior to molding thereof:
